

Laboratory Activity #4

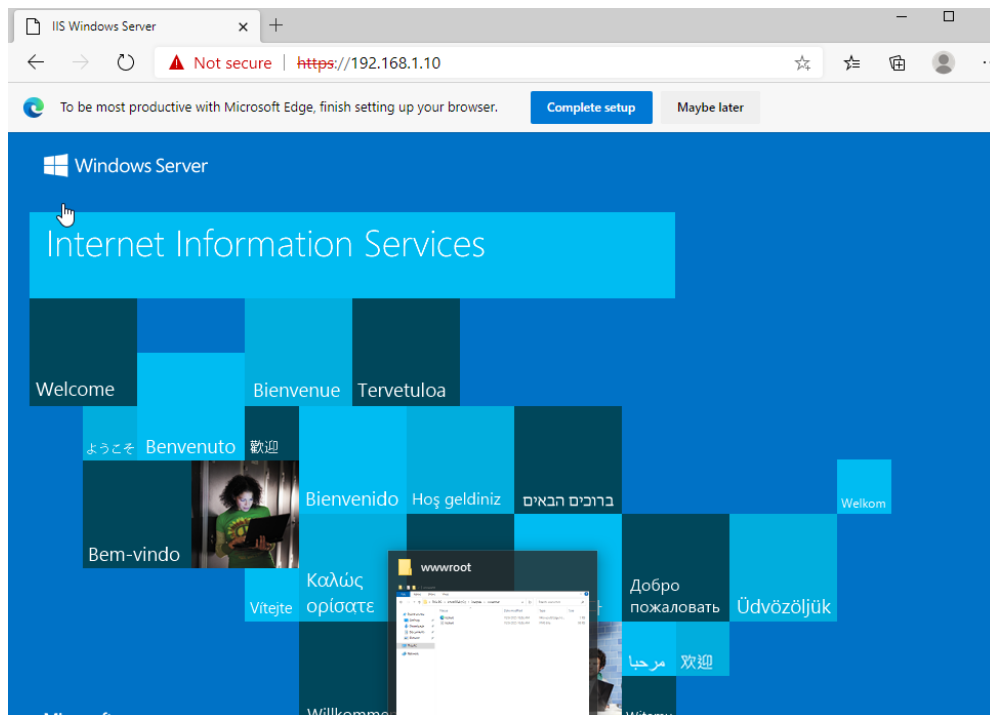

1. Install and Configure IIS Web Server and Host a Website in Windows Server.

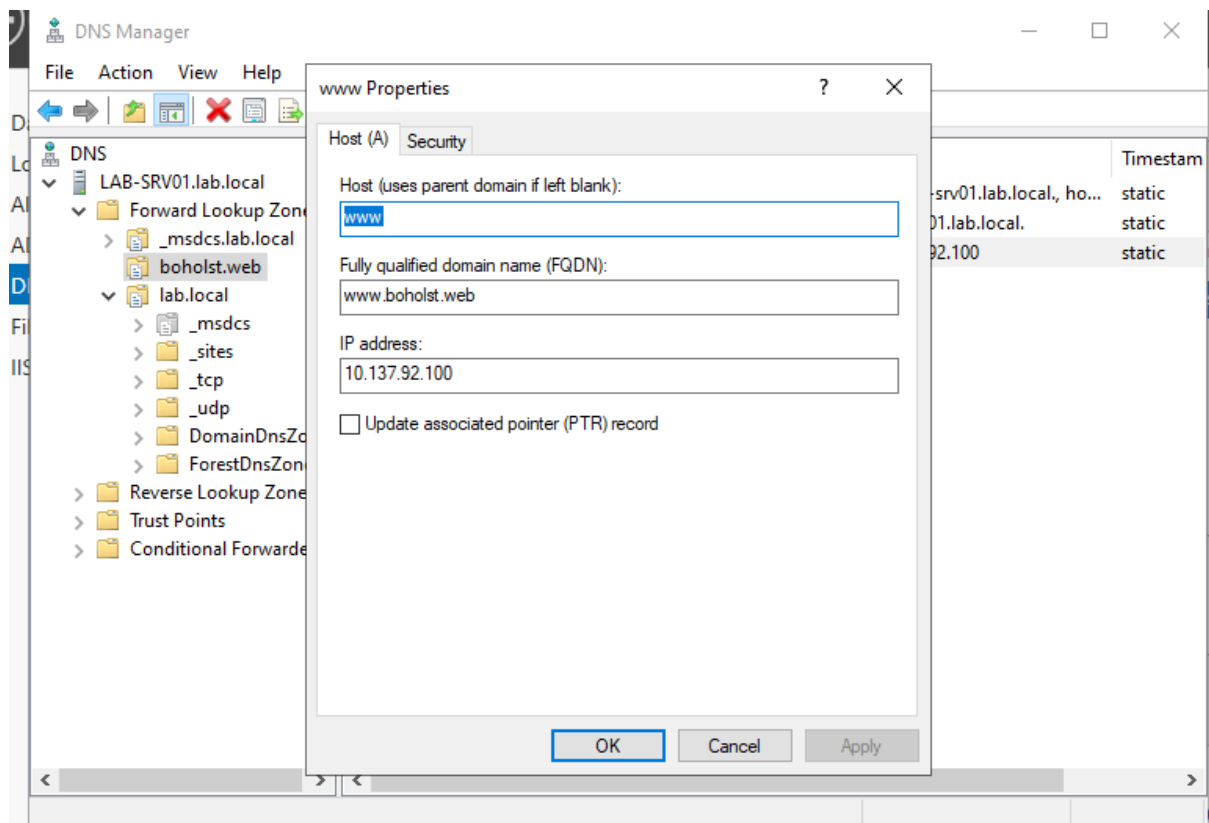

CERTIFICATE CREATION (since the default website is marked as not safe)

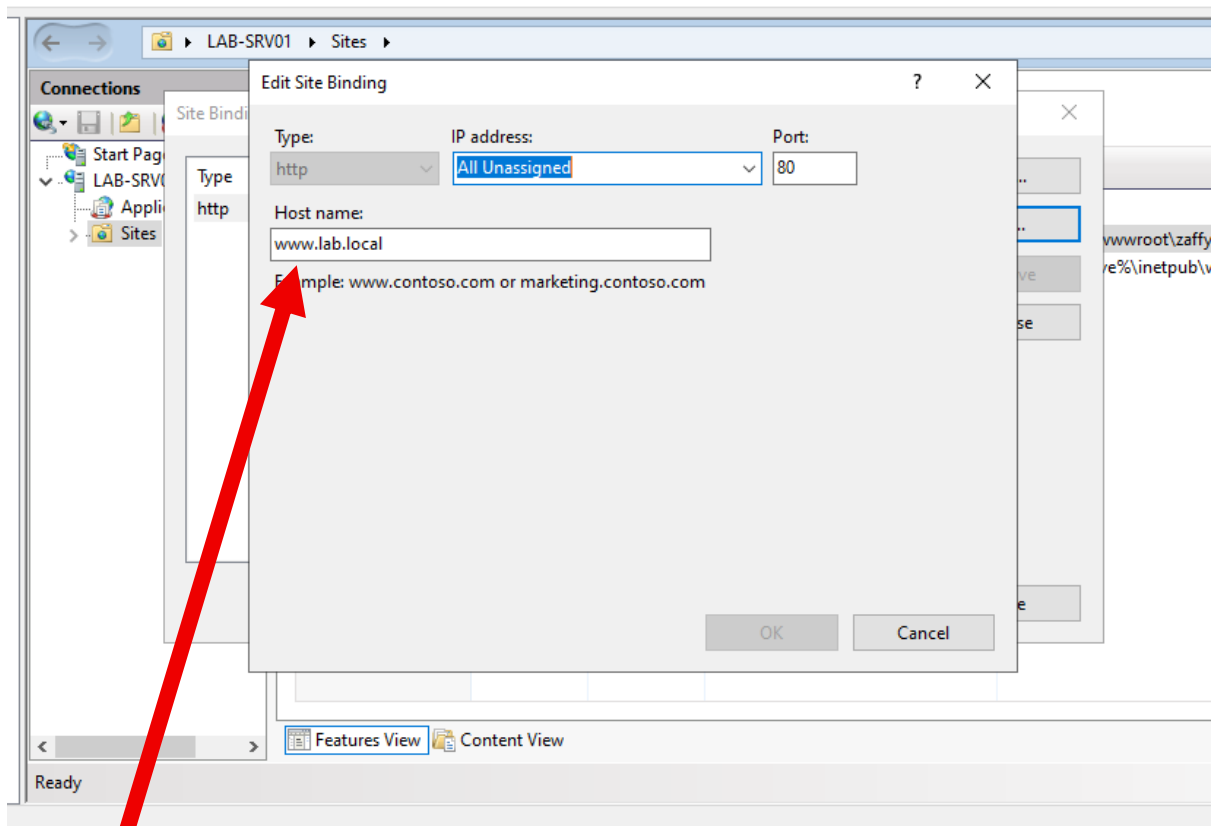

DEFAULT LOCALHOST WEBSITE

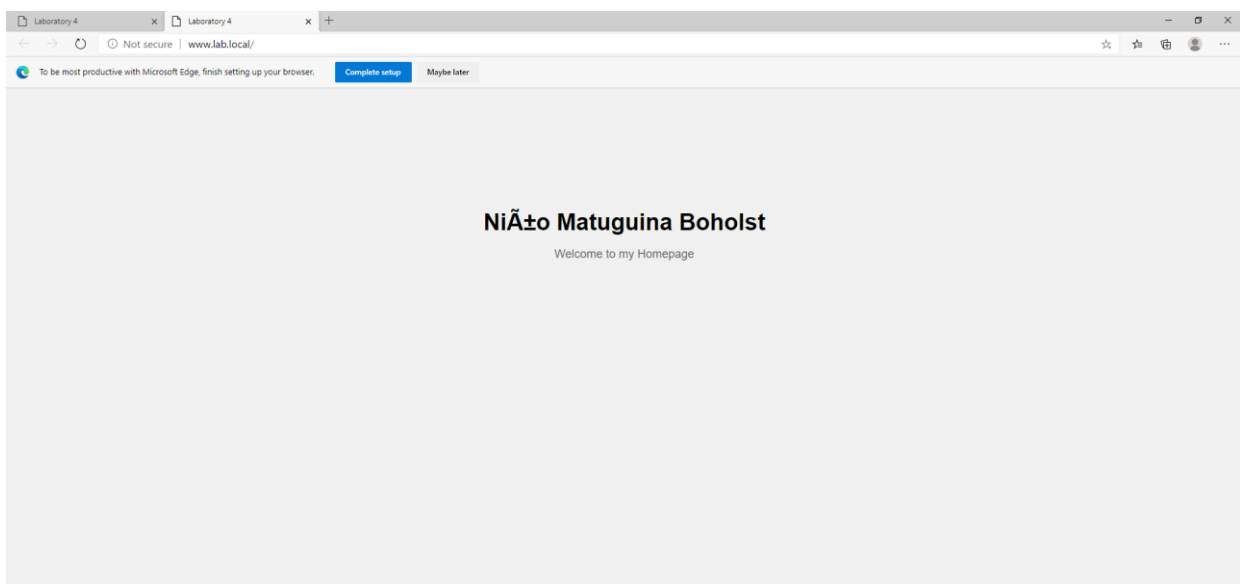

CREATING HOST

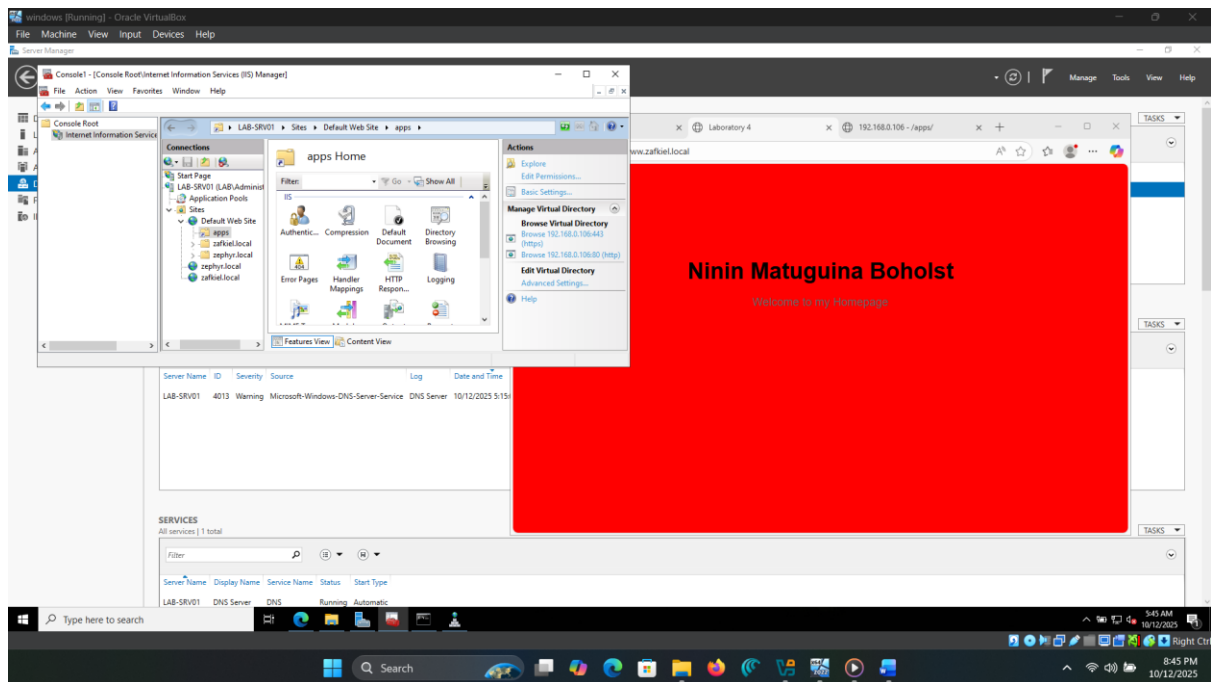

AFTER MAKING THE HOST, edit the newly created website and add “www” in the hostname.

(RESULT)

MY 2nd WEBSITE

CONNECTING TO THE PHYSICAL LAYER

STEPS:

1: Go to File Explorer and find these directories until you find the “Hosts” file.

C:\Windows\System32\drivers\etc

Name	Date modified	Type	Size
hosts	10/12/2025 9:28 PM	File	1 KB
hosts	5/31/2025 11:54 AM	iCalendar File	2 KB
lmhosts.sam	4/1/2024 3:24 PM	SAM File	4 KB
networks	5/7/2022 1:22 PM	File	1 KB
protocol	5/7/2022 1:22 PM	File	2 KB
services	5/7/2022 1:22 PM	File	18 KB

Open it and configure it inside

```
File Edit View H1  B I  A
# Copyright (c) 1993-2009 Microsoft Corp.
#
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
#
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
#
# For example:
#
# 102.54.94.97 rhino.acme.com    # source server
# 38.25.63.10  x.acme.com       # x client host
#
# localhost name resolution is handled within DNS itself.
# 127.0.0.1 localhost
# ::1 localhost
192.168.0.106 ninin.local
192.168.0.106 zephyr.local
192.168.0.106 zafkiel.local
```

Since my server is running on the 192.168.0.106 ip address so both in server and physical computer should be configured like that.

The Result:
